

**Are you a publisher?**  
 Use the **bookDAPer** tool to calculate and display the environmental impact of your publications and to declare the certifications and good environmental practices of the companies that have been introduced in editing, designing and printing.  
**bookDAPer** allows generating and obtaining bDAP ecolabel of your books and magazines printed on paper. The **bDAP** ecolabel can be included directly in the publication itself as an element of information.  
 You will find it on [www.bookdaper.cat](http://www.bookdaper.cat)

**Greening Books Project** presents **the good practices** guidelines for eco-publishing and eco-design with very useful recommendations for publishers, design centres and printing houses. It includes proposals to minimize the environmental impact at each stage of the life cycle of publications:

extracting raw materials, design, printing, finishing, packaging, distribution, use and waste management (end of life).

The **guide** is an essential tool to **reduce the environmental impact of the publications**. Download it on [www.greeningbooks.eu](http://www.greeningbooks.eu)

**During the year 2013 the bookDAPer tool is in demo version and its use is free.**
